FIREBASE

CONCEPT

UI/UX

### ABOUT THE PROJECT

Jumpon is a Social Activity application, where users can create invitations and find events from their friends and in their area. It's a fun and interactive way to build a bridge between the digital and real world to meet up with friends and family.

### OUR WORK

We created the concept after we were approached with the idea. We broke down these ideas and created features, concept and a business model out of it. As a next step we build a clickable prototype that we tested with students at a close by university and shortly after started the development of the app and the backend.

The app was discontinued due to disagreements within the founding team.

# Aviation Docs

Aviation Docs

SWIFT

UI/UX

## ABOUT THE PROJECT

Aviation Docs™ provides pilots, fleet operators, and maintenance personnel with access to Fleet, Aircraft and Aircraft-type specific document libraries on the iPad from anywhere in the world!

This application is made available at no charge to flight departments that currently utilize AviationDocs Cloud™ hosted document library services.

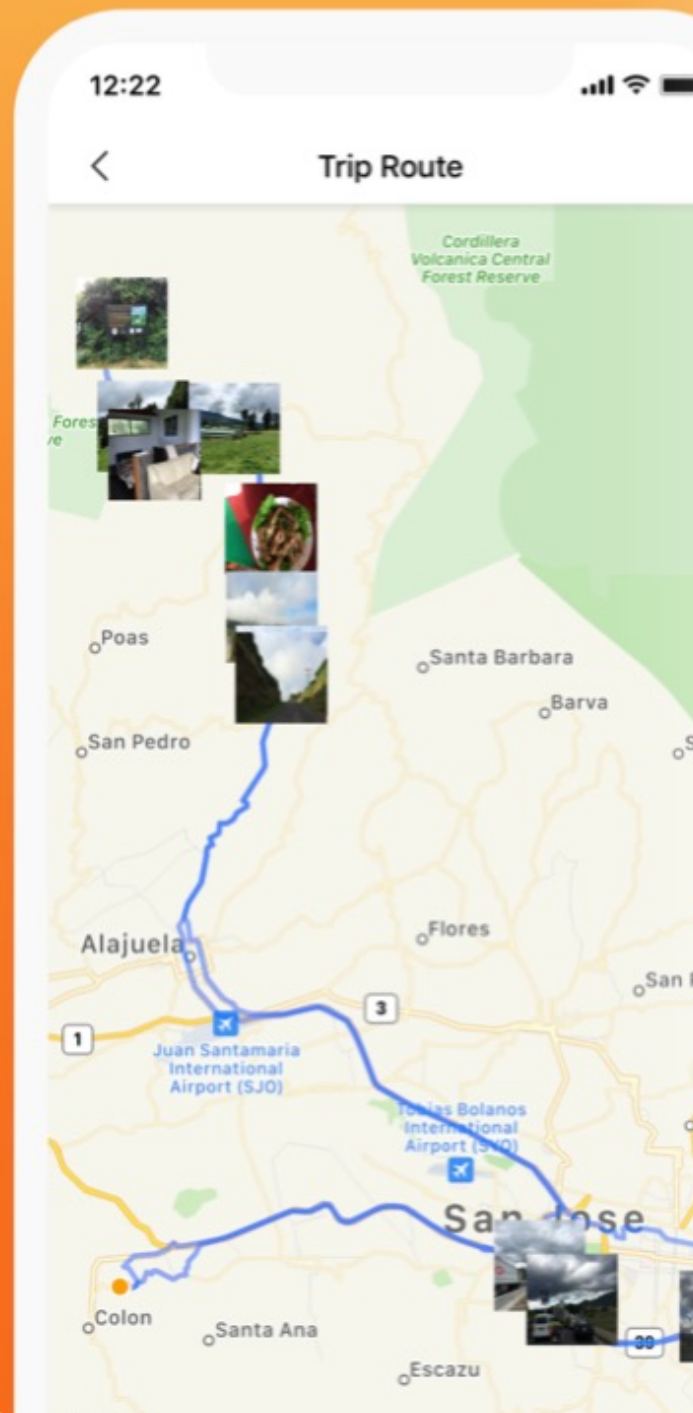

## OUR WORK

Developed v3 of the application from scratch and being responsible for its user interface design.

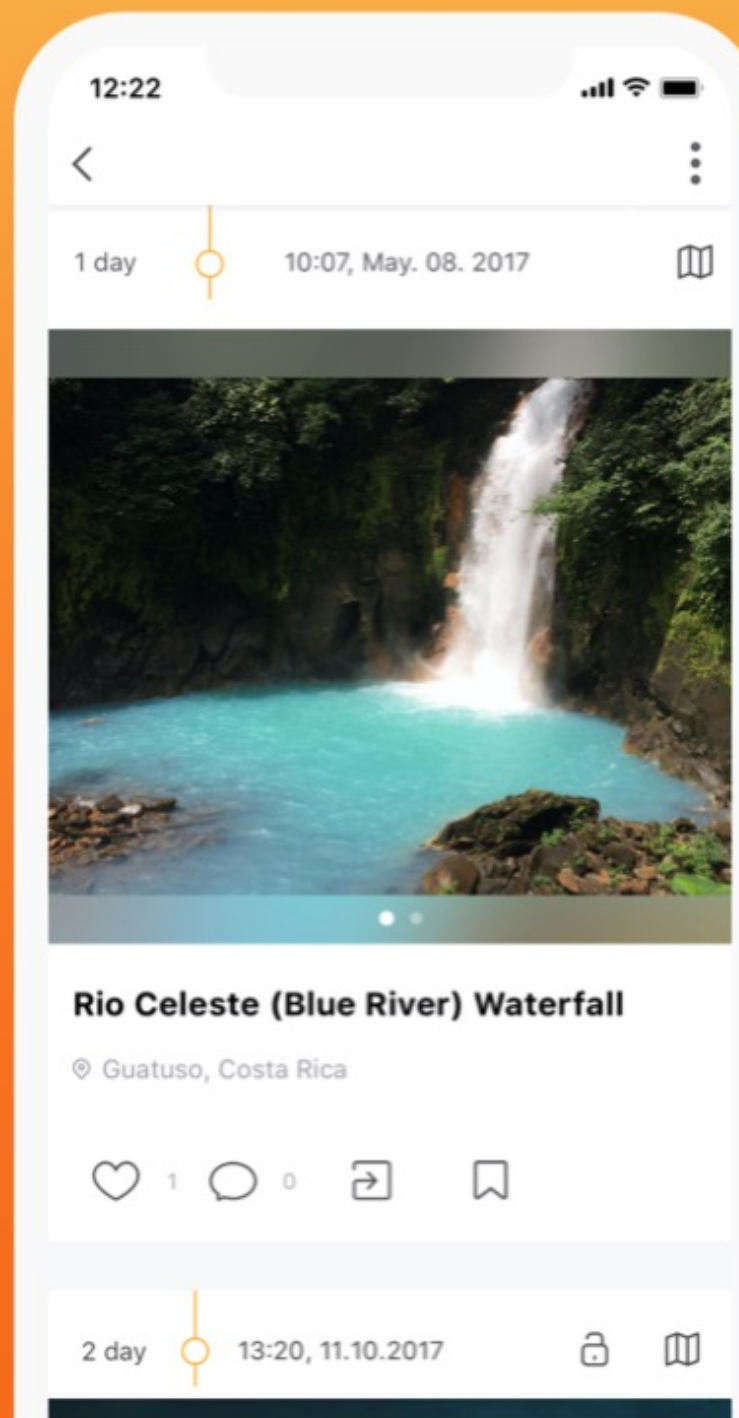

# Enguide

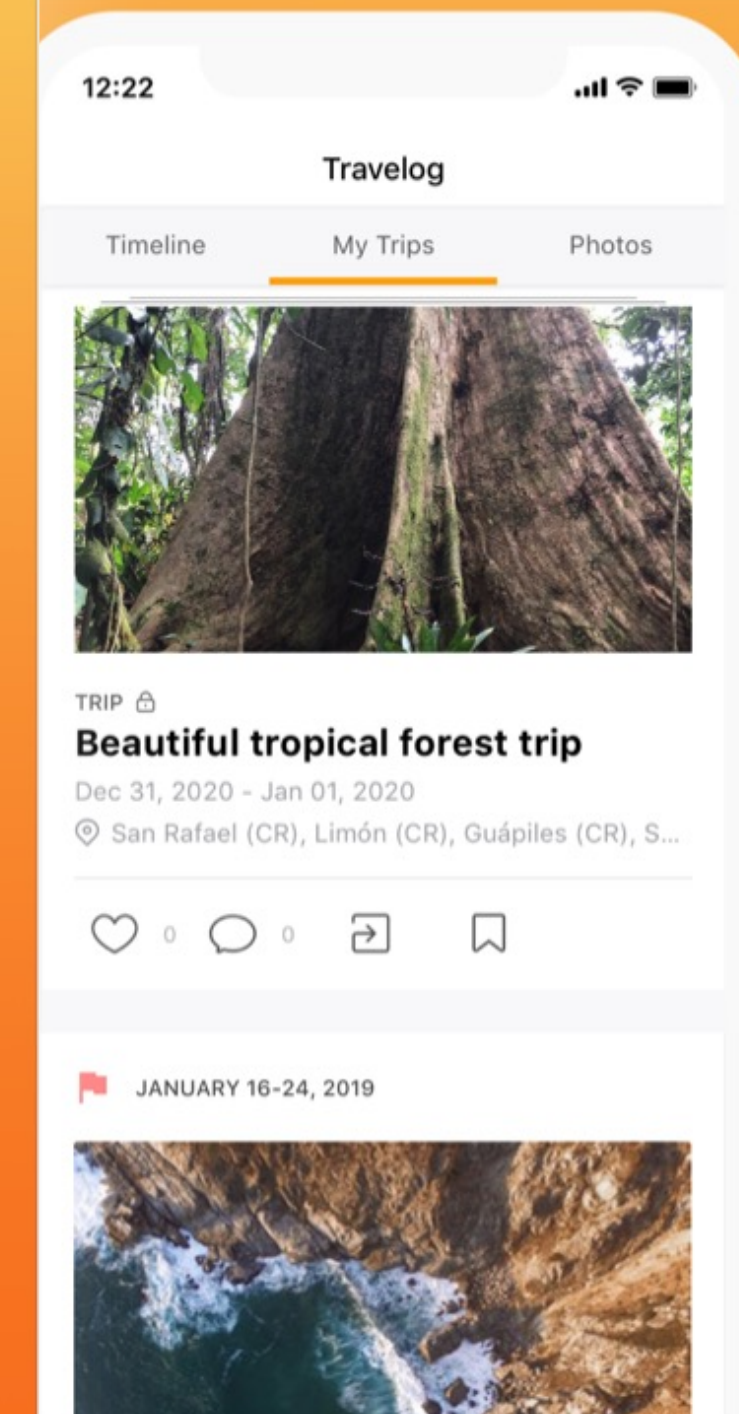

Easily record and share your trips

Publish a beautiful travel blog

Invite your friends to follow your travels

NIKOLAY

## Enguide Travel Blog Trip Guide

SWIFT

### ABOUT THE PROJECT

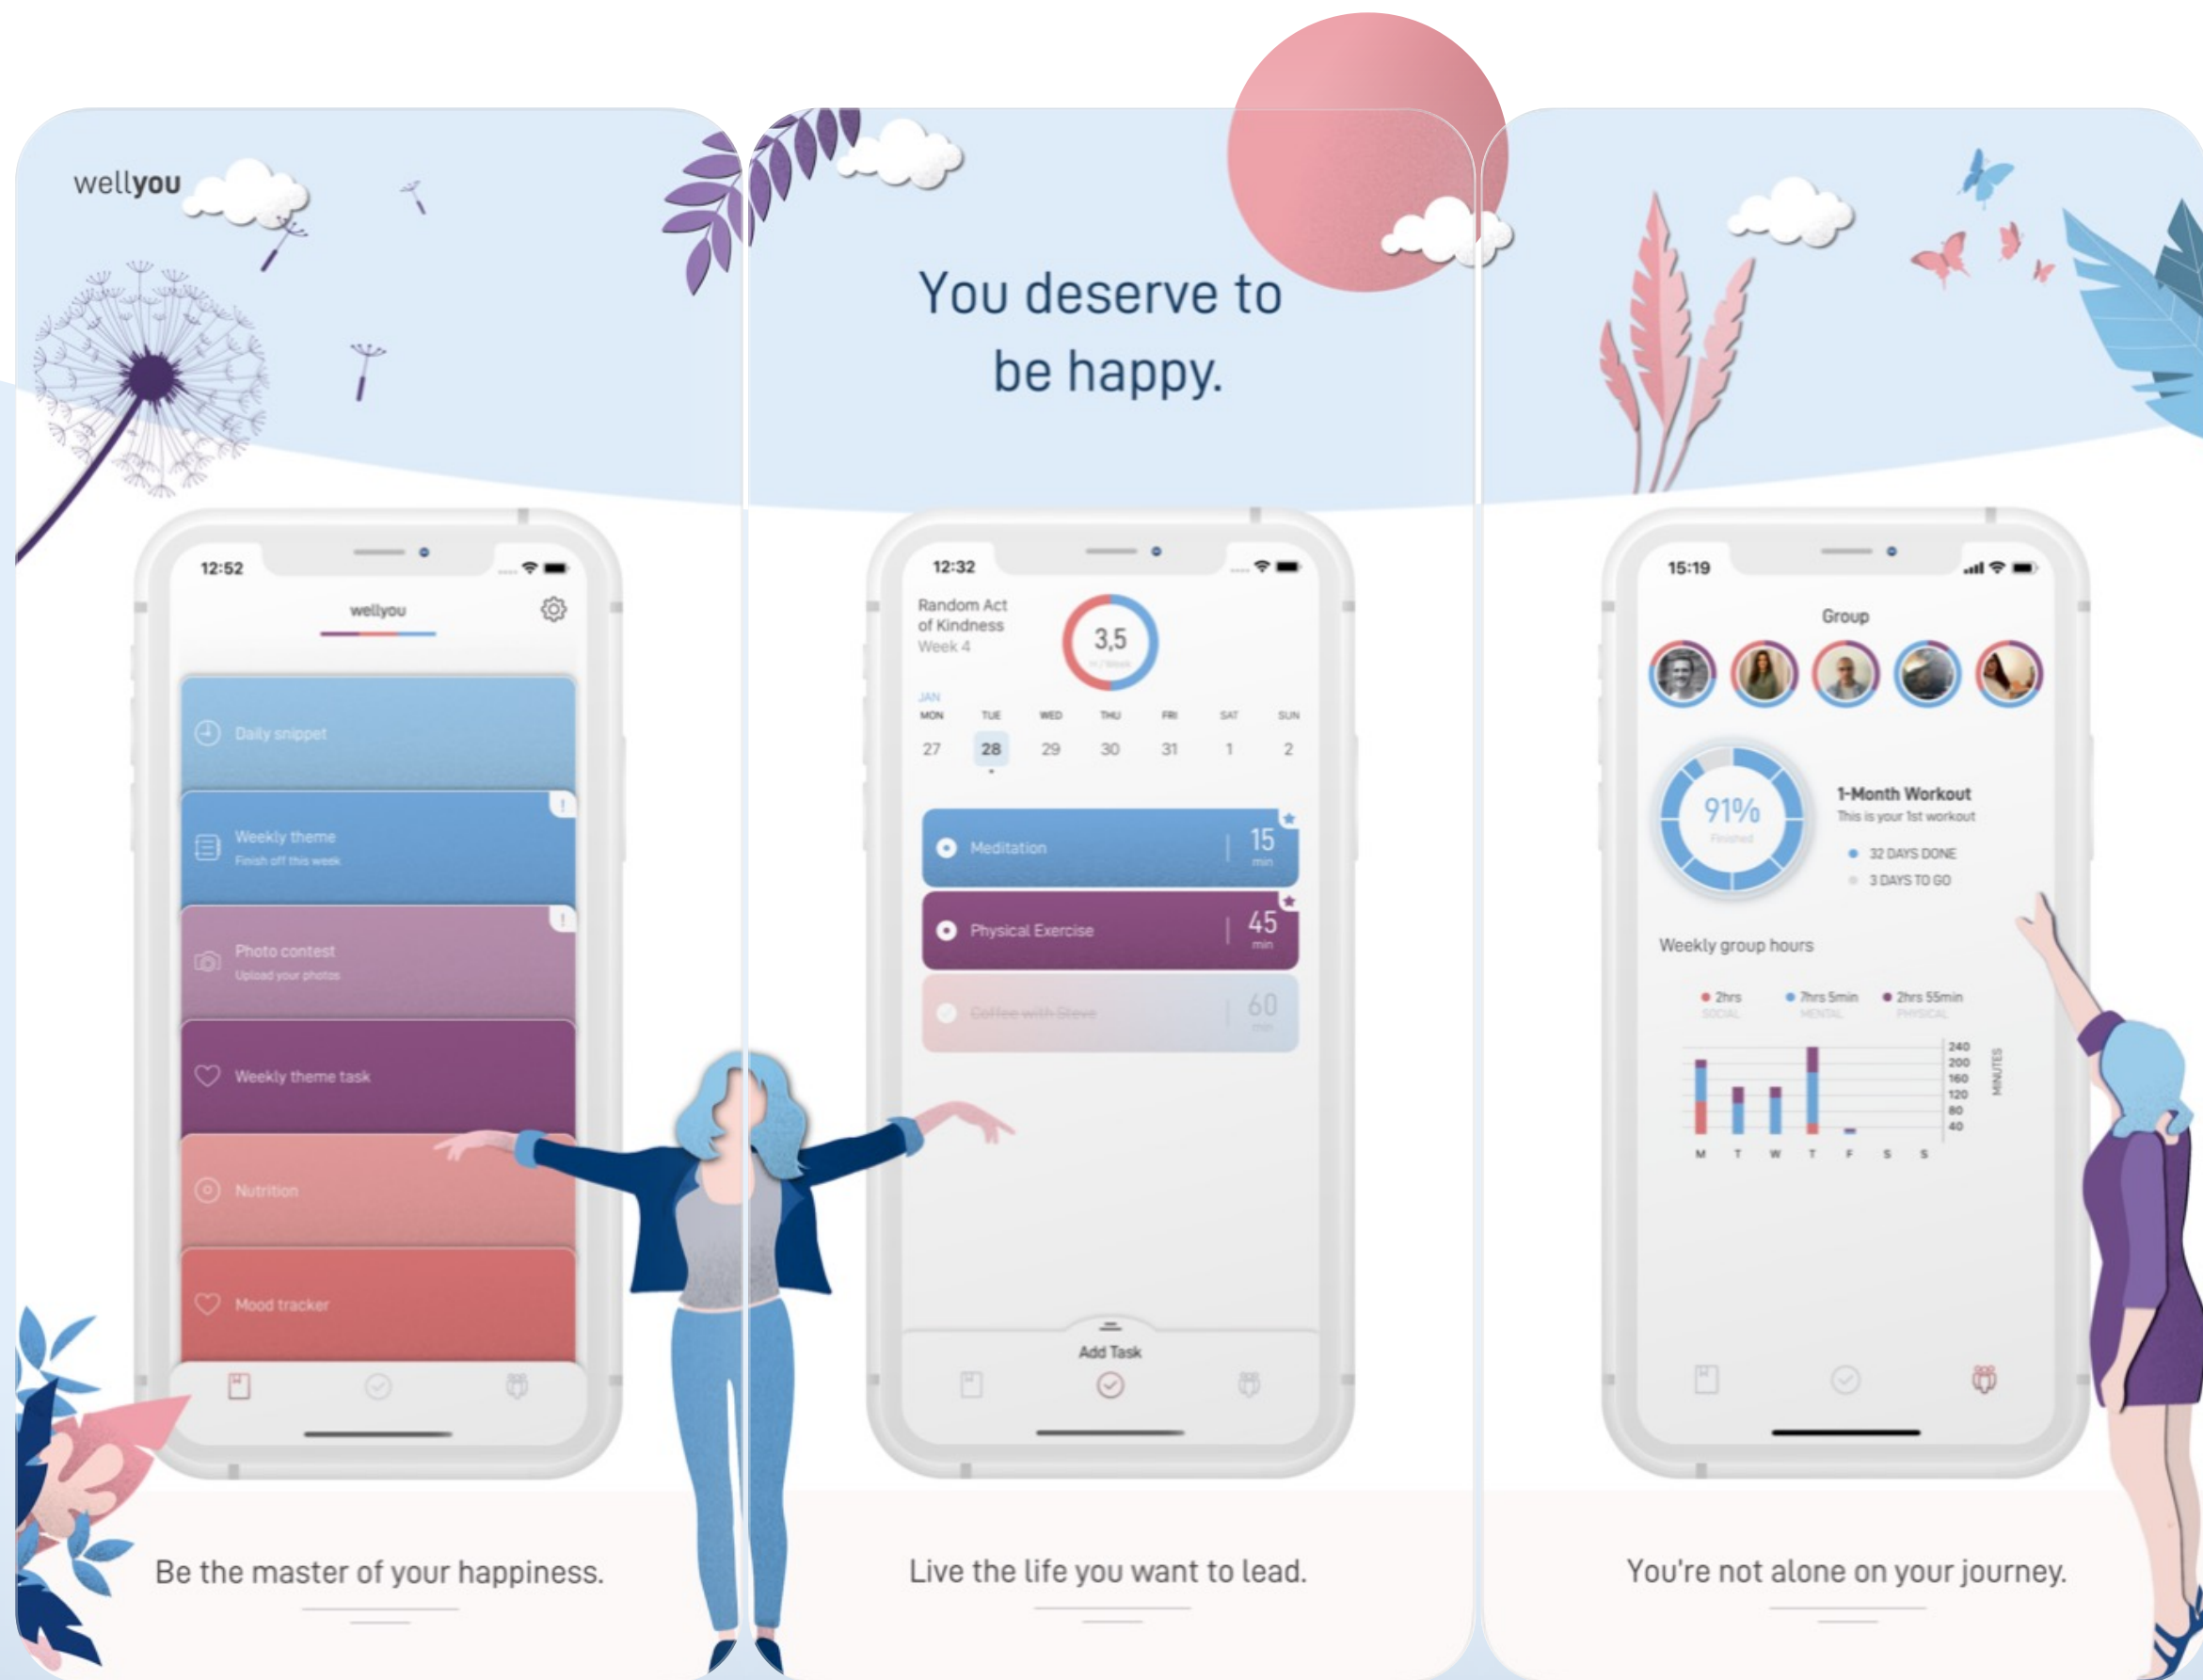

Hit the road with Enguide! Enguide is your go-to travel blogging and travel discovery-networking app. It is the place for easy sharing of your travel stories, tips and trips. Record your trips; publish your travel stories and trips; discuss destinations, places and activities. Follow travel lovers, expedition, mountain and city guides. Join the only travel social network in the world.

### OUR WORK

We developed and completely reimplemented the iOS app for the owner, while enhancing the functionality and performance.

### ABOUT THE PROJECT

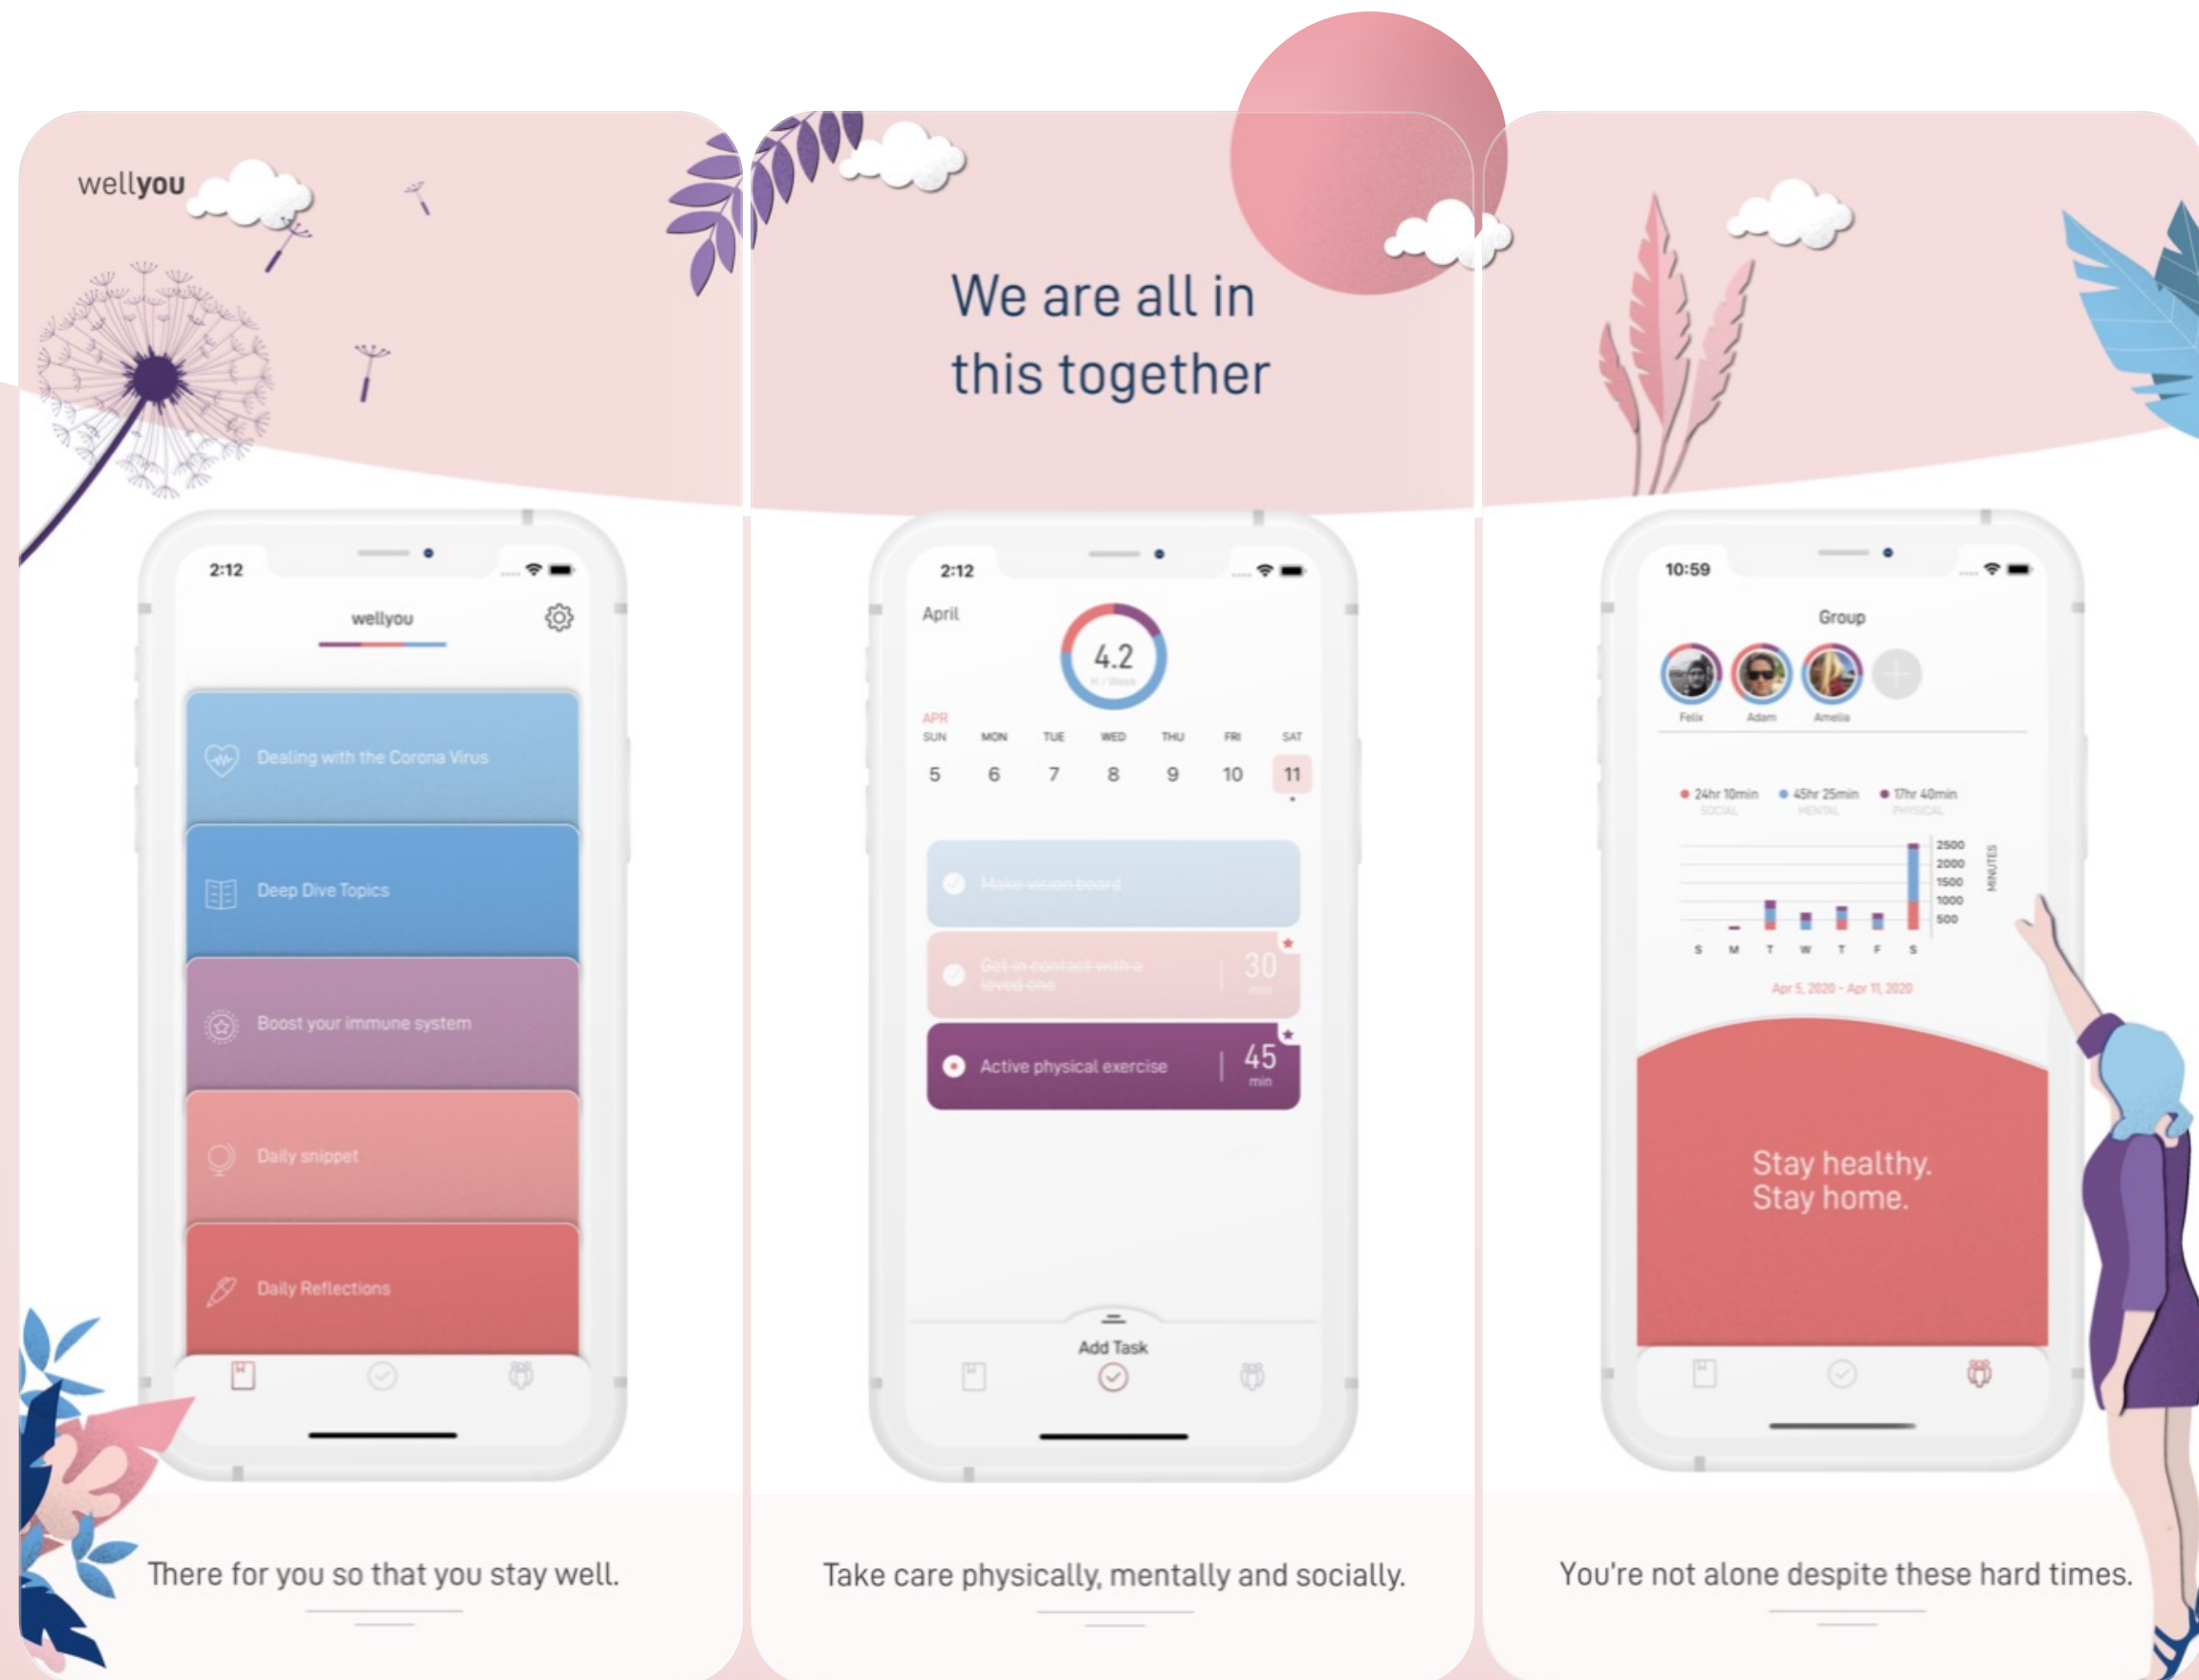

wellyou is a holistic program and real-life adventure game designed to transform your physical, mental, and social health. Rooted in science, it provides you with knowledge and tools for a sustainably happier and healthier life. wellyou helps you put theory into practice because real change has to be experienced!

### OUR WORK

We communicated the concept, broke down the idea's to make it feasible fitting into an application. Once the concept was agreed up on, we created the first mockup design and user tested them. After we got the okay for development we started setting up the project and started building the front and backend of the product, while staying close in communication with the owners.

### ABOUT THE PROJECT

Only reliable and trustworthy guidelines as provided by official health authorities will be presented to stop the spread of false information and with this, help you feel less overwhelmed. Our deep-dive topics have been written by our psychologists and nutritionists to help you thrive physically, mentally, and socially while in self-isolation. These topics offer information and possible solutions to difficulties we all may experience during these times of crisis.

### OUR WORK

Shortly before the Corona virus hit, we finished the **wellyou - be happy!** development. Due to this event the owners decided to build a separate application out of the original that is adjusted to help people's mental health in quarantine. We were deeply involved in all decisions that had to take place for the pivot.

## Virus Simulation (WIP)

Currently in development

PYTHON PLOTLY-DASH PANDAS REACT UI/UX

### ABOUT THE PROJECT

The Covid-19 simulation is a dynamic web application that allows users to set up their own parameters and run simulations about the impact of any type of virus. The goal is for the user to understand what impact certain changes set from the government will have what kind of affect to the spread of the virus.

### OUR WORK

We created the concept based on the give idea that was previously communicated, prepared and discussed potential business models and technology suggestions. Once the project outlines was agreed on we developed the first User Interface and developed the MVP for testing.
